DIGITAL LITERACY PROJECT REPORT

Name: Atharv Shashikant More

Reg No.: 25BCE10148

Branch: BTech CSE

Year: FY

Course Code: CSE0001

Date: 30 March 2026

Introduction

This Digital Literacy Project was designed to enhance my understanding of essential digital tools and online practices. The project covered multiple tasks including poster creation, setting up professional platforms, creating online forms, practising coding, and understanding cyber safety. Each task helped me explore different aspects of digital literacy, such as communication, data collection, and online security. Through this project, I gained practical knowledge of tools like Canva, GitHub, Google Forms, and HackerRank. It also helped me understand the importance of responsible digital behavior and professional communication. Overall, this project improved my technical skills and awareness of how digital platforms are used in academic and professional environments.

Task 1

For this task, I created an infographic using Canva on the topic of digital literacy. The design included sections such as email etiquette, useful tools, and safe online practices. Canva made it easy to use templates, icons, and layouts to create a visually appealing poster. I focused on organizing the content clearly so that it is easy to read and understand. The use of colors and icons helped in making the poster engaging. Initially, arranging the content properly was challenging, but Canva’s features helped me improve the design. This task enhanced my creativity and taught me how to present information effectively using digital tools.

Task 2

In this task, I created profiles on GitHub, LinkedIn, and Kaggle. GitHub is used for storing and managing coding projects, LinkedIn is used for professional networking, and Kaggle is used for data science practice. These platforms help students build

skills and showcase their work. Over the next four years, I plan to use GitHub to upload my projects, LinkedIn to connect with professionals and apply for internships, and Kaggle to improve my analytical skills. This task helped me understand the importance of building an online professional presence.

Task 3

For this task, I used Google Forms and HackerRank. I created a Digital Literacy Awareness Quiz using Google Forms with different types of questions. This helped me understand how to collect and analyze data. I also solved a beginner-level coding problem on HackerRank, which improved my logical thinking and coding skills. These tools are useful for academic purposes such as surveys, quizzes, and coding practice. This task gave me practical experience in using digital platforms effectively.

Task 4

In this task, I learned about professional email writing and responsible social media use. I wrote formal emails following proper structure and etiquette. I also created a checklist of do’s and don’ts for social media. Poor digital communication can cause misunderstandings, such as sending informal messages to professors. This can be avoided by using polite language and clear communication. This task helped me understand the importance of professionalism in digital communication.

Task 5

While researching cybercrime, I was surprised by how easily people fall victim to scams like phishing and online fraud. Many attacks rely on simple mistakes such as

clicking unknown links or sharing OTPs. I realized the importance of being cautious online. One habit I will change is verifying links and sources before sharing any personal information. I will also use stronger passwords and enable two-factor authentication. This task increased my awareness of online safety.

Conclusion

This project helped me gain practical knowledge of various digital tools and platforms. I learned how to create designs, manage repositories, collect data, and communicate professionally. It also improved my awareness of cyber safety and responsible online behavior. Overall, this project enhanced my digital literacy skills and prepared me for academic and professional challenges.
